

La commande getopt

38

```
#!/bin/bash
while getopt 'abc' OPTION; do
    case "$OPTION" in
        a)          echo "Option a used "
                    ;;
        b)          echo "Option b used"
                    ;;
        c)          echo "Option c used"
                    ;;
        ?)          echo "Usage: $(basename $0) [-a] [-b] [-c]"
                    exit 1
                    ;;
    esac
done
```
