

# La commande getopt

40

```
#!/bin/bash
while getopt 'ab:c:' OPTION; do
    case "$OPTION" in
        a) echo "Option a used"
            ;;
        b) argB="$OPTARG"
            echo "Option b used with: $argB"
            ;;
        c) argC="$OPTARG"
            echo "Option c used with: $argC"
            ;;
        ?) echo "Usage: $(basename $0) [-a] [-b argument] [-c argument]"
            exit 1
            ;;
    esac
done
```
