

La commande getopt

39

```
#!/bin/bash
while getopt ':abc' OPTION; do
    case "$OPTION" in
        a)  echo "Option a used"
            ;;
        b)  echo "Option b used"
            ;;
        c)  echo "Option c used"
            ;;
        ?)  echo "Usage: $(basename $0) [-a] [-b] [-c]"
            exit 1
            ;;
    esac
done
```
